Corona measures: building bridges online

The corona crisis clearly stresses the importance of novel interdisciplinary research on complex challenges. We stay highly committed to building bridges between all disciplines, and are discovering new options in a virtual setting. We have developed a “digital twin” of the institute for our community and events are organised online.

UBIAS call for essays: the world after the corona crisis

The corona crisis not only challenges disease control and crisis management, but may also have far-reaching impact on countries, societies and international cooperation. The global UBIAS network has launched a call for essays on the theme: “how will/should the world change?” Researchers from all disciplines can participate.

New research: social unrest caused by pandemics

Pandemics are known to affect societies at large. The current COVID-19 outbreak has major implications, that could potentially cause social unrest. A team of researchers from IAS and TNO is brought together to study the main drivers of social unrest and the risk potential in Dutch society. The project defines a use case of the collaboration Policy by Simulation.

> About the project

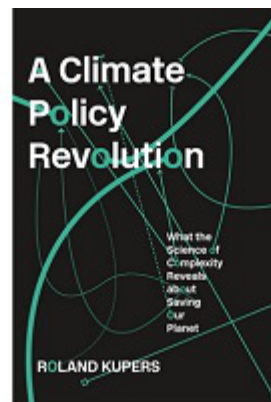

Theme group on polarisation

The polarisation of opinions is an important and probably increasing societal problem. Han van der Maas organised a think tank to discuss current developments in polarisation research and to look for new avenues of collaboration across disciplines. It marked the start of a new theme group at IAS.

A Climate Policy Revolution

On the occasion of the publication of IAS fellow Roland Kupers' new book "A Climate Policy Revolution" we will convene (online) a select group of researchers and policy makers to discuss how complexity thinking is relevant to public policy, focussing in particular on climate policy.

New interdisciplinary research project on AMR

The Amsterdam Institute for Global Health and Development (AIGHD) and the UvA Institute for Advanced Study (IAS) joined forces to better understand antimicrobial resistance (AMR) patterns and key drivers of AMR emergence. The collaboration resulted in a new research project, granted by the Joint Programming Initiative on Antimicrobial

Resistance (JPIAMR).
